DETAILED ACTION

Double Patenting

Claims 1-11 and 13-25 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-25 of U.S. Patent No. 6,632,886. Although the conflicting claims are not identical, they are not patentably distinct from each other because the differences are:

(1).The formula (I) of the instant claims is a narrow form of this of claim 1 of the reference since it requires that when R1 and R2 are both bromide atoms, at least one of R, R4,R5 and R6 is different form hydrogen atom,

(2) the polymeric optical film of the instant claims is included in the broad teachings of the claims of the reference, a device selected from the group consisting of a liquid crystal screen, an electroluminescent screen and a polarizer transparent conducting film comprising said polymeric optical film.

However, the reference does disclose the same or similar reactants to form the same or similar products of the claimed formula. Therefore, it would have been obvious to one of ordinary skill in the art to select reactants under conditions to form the products of the claimed formula since they have been shown to be effective in a similar system and thus would have been expected to provide adequate results, one or more polyarylates of the claimed repeating units. There is no showing of unexpected results derived from said selection.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1711

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 12 is rejected under 35 U.S.C. 102(b) as being anticipated by Tien et al (5,007,945).

The reference discloses polyarylate membranes had the general structural formula (see col. 4, Example 1) in that R1=R2=bromide atom and R5=R6= hydrogen, as disclosed in the instant claim 12, then the formula of the instant claim 12 is identical with this of the prior art.
